GitHub Learning Lab

Transform developer training with hands-on, interactive learning experiences on GitHub.

Project-driven and practical

Courses take place in GitHub repositories, putting real-life application at the center of each assignment.

Bot-supported learning

Our friendly bot keeps learning engaging and approachable with instant feedback in issues and pull requests.

Real world skills, faster

Learning Lab courses mimic everyday working environments, offering easy customization for preferred integrations and tools.

Bring Learning Lab to your organization

For development teams of 10 or 10,000

Share knowledge at scale

Give your developers room to get creative and share their expertise across the organization, using code they've already written.

Customize learning

Meet your learners where they are and get them up to speed quickly with customizable courses that match their actual work processes.

Educate with an industry-leading platform

Train your team on the platform trusted by millions of developers around the world.

Track growth and real-time ROI

Assign courses, verify completion, and analyze course performance with the organization dashboard.

Create your own private courses and learning paths

Develop courses specific to your team, then add them to comprehensive learning paths along with videos and other outside learning resources.
